

Adrian Baira

Computer Engineering Technologist

Edmonton, AB | (780) 905-3413 | ajbaira3@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

OBJECTIVE

NAIT Computer Engineering Technology graduate with hands-on experience troubleshooting hardware, software, and networked systems. Seeking an entry-level role in software development, embedded systems, IT support, or web/application development, applying strong technical problem-solving skills, attention to detail, and clear communication across hardware and software environments.

TECHNICAL SKILLS

- Operating Systems: Windows, macOS (installation, configuration, troubleshooting)
- Networking Fundamentals: TCP/IP, wireless setup, basic network troubleshooting
- Hardware Troubleshooting & Diagnostics: PCs, peripherals, embedded devices, sensors
- Industrial & Embedded Systems: PLC ladder logic, sensor/actuator interfacing, electronic circuit design, simulation, and measurement
- Programming/Scripting: C, C++, C#, Python, JavaScript, PHP, SQL, HTML5, CSS3, ASP.NET Core, AJAX, jQuery
- Tools: Git, Visual Studio, VS Code, SQL Server Management Studio, KiCad
- Soft Skills: Technical support, customer service, end-user support, troubleshooting, documentation, teamwork, multitasking, time management, clear technical communication

EDUCATION

Northern Alberta Institute of Technology (NAIT)

Sept 2022 – Apr 2025

Diploma, Computer Engineering Technology

- Trained in computer hardware and software, including system analysis and design, embedded controllers, PLC programming, circuit design/simulation, and dynamic web development
- Completed multiple collaborative projects simulating real-world tech support and development environments

PROJECTS

Automated Connect 4 Game Board

Capstone / Collaborative Project

- Designed and built a physical Connect 4 board using motors, sensors, and microcontrollers
- Programmed game logic, motor control, and wireless multiplayer functionality using C and Python
- Integrated hardware and software for accurate detection and a remote play experience

Collaborative Whiteboard App

- Built a real-time shared whiteboard tool in C# using TCP/IP sockets, with custom networking logic and a GUI supporting multiple concurrent users, plus Python interoperability

Motion-Activated Door System

Mini Prototype

- Designed the PCB in KiCad and programmed firmware to detect motion and trigger a servo mechanism
- Demonstrated practical application of embedded systems design and hardware/software integration

Photo Booth Web App

Personal Project

- Built a full-stack web photo booth using React and Node.js, letting users capture photos directly in the browser
- Implemented automated email delivery and dynamic QR code generation so users can instantly save and share photos

WORK EXPERIENCE

Lead Stock Associate / Sales Associate — Foot Locker, Edmonton, AB (Part-time)

Dec 2021 – Present

- Receive and process incoming stock shipments, scanning items into the inventory system and organizing by gender, brand, and size for accurate, easy-to-navigate stock
- Fulfill online customer orders end-to-end: picking, inspecting for premium condition, scanning, and packaging for FedEx pickup, checking the order queue hourly to ensure timely turnaround
- Work the sales floor as a Sales Associate, assisting customers with product selection and retrieving requested items to drive sales and customer satisfaction
- Process Return to Vendor (RTV) shipments, verifying inventory with management before returning stock to the warehouse
- Maintain stockroom cleanliness and organization while training and mentoring new hires on stock procedures
